Technician.Academy is committed to providing professional onsite and online training to educate the technicians of today and tomorrow. Register today for our interactive fuels systems course taught by ASE Master Technician Richard Young.

Fuel Your Knowledge. This course uses real world instances to provide examples of how a modern technician can use the digital storage oscilloscope to improve diagnostic time. Real customer vehicle case studies will be explained where the standard diagnostic flow was unable to determine the cause of the failure and the DSO proved to be an irreplaceable tool in properly diagnosing the vehicle.

Young holds an associates degree in Automotive Technology, is OEM certified and has over 30 years of hands-on experience that allows him to bring a real-life approach to his training.
