Technician.Academy is committed to providing professional onsite and online training to educate the technicians of today and tomorrow. Register today for Technician.Academy's latest course taught by ASE Master Technician Richard Young.

DSO Need to Know. Build your skills with a better understanding of today's modern digital storage oscilloscope. The course builds on the voltage and timebase settings with emphasis on trigger function and its many specific uses. By better understanding the DSO and diagnostic patterns for its use, you'll be able to speed up your diagnosis to facilitate a complete and thorough repair of the vehicle.

Young holds an associates degree in Automotive Technology, is OEM certified and has over 30 years of hands-on experience that allow him to bring a real-life approach to his training.
